# JOIN US ON THE JOURNEY TO OUTER SPACE!

Hold onto your seats, because the cryptocurrency world is about to witness an electrifying revolution unlike anything before! Introducing **\$0xGalaxy** the perfect blend of Meme and Utility. As you may be aware of the Open AI team behind that successful launch of World Coin, which raised an astounding \$115 million, **\$0xGalaxy** aims to revolutionize the meme token market using this hype. This isn't just any ordinary meme token; **\$0xGalaxy** has a never seen before utility that encourages community engagement with a result in burns. This is just one of the community related utilities, going forward the team of developers are working on more utilities that will be revealed in due course.

Prepare to be amazed as **\$0xGalaxy** takes you on a wild ride through a world of boundless possibilities! Step into a realm where Utility tokens will reign supreme and **\$0xGalaxy** is the undisputed leader of the new cryptocurrency revolution, that's right we are bringing back the utility meta with a meme twist.

This extraordinary token has assembled a powerhouse team of Developers, Whales and Marketing experts, ready to propel it to unimaginable heights. With their expertise and dedication, **\$0xGalaxy** is set to conquer the market with their ecosystem of bots to help propel other projects to hit the heights they intend to.

# UTILITY

We have a team full of experience in all aspects of running defi projects, one thing we can all agree on is that community is the key to any project's success. How do we get the community to get behind a project and stay supportive when things get quiet?

We introduce the first BOT of our ecosystem, the Twitter Engagement Bot, running on an 'Engage to Burn' mechanism, when community engage the bot burns supply enhancing the holders holdings by simply engaging on the projects socials. For example, the team post a twitter post, the aim is for the community to hit 50 likes and 50 retweets, the bot has parameters set so when this is achieved the bot buys back on the chart and burns the tokens. Simple but so affective!

Our team of top-level developers are building out a full ecosystem of telegram bots powered by AI, these bots are dedicated to help propel defi projects to new heights by encouraging community engagement. The fees generated from these bots will go back into the 0xGalaxy chart and the tokens will get burned!

# SECURITY

The **\$0xGalaxy** team take security extremely seriously, we have taken the measures to minimize risk when it comes to security. We understand how frustrating it is when other teams do not take security seriously and end up in a bad situation, we will do everything in our power to ensure full transparency and security. Being a team of developers, the CA will be audited pre-launch internally and tested for a period using real life environment, then post launch the CA will be audited by a third-party Auditor to ensure there are no breaches on our contract. On top of this, we will ensure our marketing wallet and CEX wallet has multi sig security to ensure safety of funds. We have our inhouse marketing team to ensure we do not have to deal with any third-party individuals for CEX listings or Marketing as we are the marketing guru's.

Decision making security. Imagine a business partnership between several individuals. A multi-signature wallet can be used to control access to their joint company funds.

They may choose to set up a 4-of-6 wallet where each individual holds one key, and none of them can misuse the funds or gain access. This means only decisions that are unanimously agreed upon by the majority will be made.
